

Diet and its impact on the risk of developing cancers: latest evidence, challenges, and emerging hypotheses

Dr Marc Gunter will provide a broad overview of our current understanding of the role of diet in cancer, particularly how we study diet in relation to cancer risk within epidemiology, a complex, challenging, and sometimes controversial area. The important role of obesity in cancer development will also be addressed as well as new and emerging hypotheses and methodologies being applied within the field.

Dr Marc Gunter

Professor and Chair in Cancer Epidemiology and Prevention
Department of Epidemiology and Biostatistics
School of Public Health, Imperial College,
London, United Kingdom

Former Branch Head
Nutrition and Metabolism Branch (NME)
IARC/WHO
